NOTICE.

We are publishing the Standard Grades of Hickory Handles as adopted December 10, 1924, by the Hickory Handle Association, it being the purpose of reputable manufacturers to discourage the practice of improper grading and misrepresentation by improper marking of packages.

The labeling and marking of goods with our private brands is a guarantee by us that the grades are fully up to the standard.

GRADES OF TOOL HANDLES.

To be made from all commercial species of Hickory. Handles to be classified by the following general rules:

1. Strength, as shown by the growth, weight and resiliency of the handle.
2. By defects, blemishes and imperfections with their relation to serviceability.
3. By color of the wood and general appearance.

NOTE: The weight and resiliency to be determined by the inspectors' knowledge of the weight of wood and required density. Rings of annual growth will not be counted unless question arises in regard to grade, when decision will be based on the annular rings.

GENERAL IMPERFECTIONS PERMISSIBLE IN CERTAIN GRADES.

- (A) **KNOTS**—When not exceeding five-sixteenths the diameter of the handle where it occurs.
- (B) **BIRD PECKS**—Having the appearance of small sound or open knots, with the discoloration due to the infiltration of foreign matter through the bird pecks.
- (C) **IRON STREAKS**—Small thread-like streaks due to the absorption of mineral substances from the soil.
- (D) **CHECKS OR SPLITS**—In the surface of the wood, caused by seasoning, when not affecting the serviceability.
- (E) **WORM HOLES**—Only those caused by insects or grubs working in the timber before cut and when not exceeding one-sixteenth inch in diameter.
- (F) **CROSS GRAIN**—Where the growth or grain of the wood does not run parallel with the center line of the handle.
- (G) **DIP GRAIN**—Curvature in the grain of the wood, deflection caused by knots or snarls.
- (H) **SAP STAIN**—Where discoloration is shown and decay or rot has not set in.
- (I) **FAILURES**—Where in turning insufficient wood prevents a perfect shaped handle, when not exceeding one-eighth the diameter of the handle at point occurring, when not extending one-quarter the length.
- (J) **SIZES**—To be within one-sixteenth inch of a specified size, or in other words a variation of one-eighth inch allowed.

GRADES.

HICKORY HANDLES 24 INCHES AND UP IN LENGTH.

DANIEL BOONE—Handles having not over 17 rings of annual growth per inch of radius, heavy weight, thrifty growth, free from all defects, all white.

PERFECTION AND AMERICAN BEAUTY—Handles having not over 22 rings of annual growth per inch of radius, good weight, live growth, free from all defects, all white.

TRIUMPH AND DAISY—Handles having not over 27 rings of annual growth per inch of radius, medium weight, live growth, permitting slight iron streaks not to exceed two in number running the entire length or their equivalent in shorter lengths, tips of red wood at one or both ends, but must show not less than eighteen inches of white wood. When all white heavy weight permitting one sound, tight knot or bird peck not over one-eighth inch in diameter, occurring in the first fourth of the length from the grasp end, or in the eye, or slight deflection of grain in sections where knots are allowed.

HERCULES AND SUNFLOWER—Handles of fair weight, live growth, permitting iron streaks to the extent of four the entire length or their equivalent in shorter lengths permitting one-third the handle red wood, slight discoloration from sap but no dark stains. When all white permitting one sound or tight knot or bird peck not over three-sixteenths inch in diameter, or two such defects where the combined diameters do not exceed three-sixteenths inches in diameter, occurring in the first third of the length from the grasp end, or in the eye, or reasonable deflection of grain in sections where knots are allowed.

GRADES.

HANDLES 24 INCHES AND UP IN LENGTH—Continued.

SUCCESS—Handles of live growth wood either red, white or mixed Hickory permitting iron streaks, two small tight knots or bird pecks, occurring in the first half of the length from the grasp end, or in the eye, or reasonable cross grain or dip grain in section where knots are allowed, sap stain where area is not greater than one-sixth of the handle, except where only slight discoloration due to sap which is permitted to any extent. Checks across the eye end permitted not over one-half inch in depth.

EAGLE—Serviceable handles not permitted in other grades having permissible defects.

HAMMER AND HATCHET HANDLES.

DANIEL BOONE—Handles having not over 17 rings of annual growth per inch of radius, heavy weight, thrifty growth, free from all defects, white.

PEERLESS—Handles of medium weight, live growth, permitting two slight iron streaks the entire length, or their equivalent in shorter streaks. All white, with exception of allowing slight tip of red at one end not to exceed two inches in length.

BEAUTY—Handles of live growth wood, permitting iron streaks, two sound tight knots or bird pecks, not over three-sixteenths inch in diameter, if in the first third length at the grasp end, or in the eye, reasonable deflection of grain in portion where knots are allowed, slight discoloration due to sap, not over one-half of the handle red wood.
